EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Walter Fasse on 7/7/2009.

The application has been amended as follows:

1. Insert --and-- before "non-perpendicular" in line 11 of Claim 52.
2. New claims 56 and 57 have been added.

Claim 56 reads as follows:

A method of varying said induced drag of said lifting wing in said aircraft wing arrangement according to claim 36, said method comprising using said control surface and said control and/or regulation arrangement to carry out the steps:

- a) **storing desired nominal values;**
- b) **performing measurements and/or calculations to acquire aircraft load data and aircraft flight condition data;**

- c) producing a control surface actuating signal in consideration of and dependent on said desired nominal values, said aircraft load data and said aircraft flight condition data; and
- d) pivotally deflecting said control surface about said rotation axis in accordance with said control surface actuating signal, so that said control surface exerts an aerodynamic force that elastically deforms said lifting wing so as to reduce said induced drag toward a minimum for a given aircraft load and a given aircraft flight condition.

Claim 57 reads as follows:

The method according to claim 56, wherein said desired nominal values represent a desired nominal deformation of said lifting wing prescribed for said given aircraft load and said given aircraft flight condition, and further comprising measuring an actual elastic deformation of said lifting wing, and producing corresponding measured data further comprising comparing said measured data with said desired nominal values, wherein said producing of said control surface actuating signal is performed in consideration of and dependent on a comparison result of said comparing, and further comprising repeating said steps of said measuring of said actual elastic deformation, said producing of said measured data, said comparing,

**said producing of said control surface actuating signal, and said
deflecting of said control surface until said measured data match said
desired nominal values.**

Claims 36 – 41, 45 – 48, and 51 – 55 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(b), claims 56 and 57 (previously presented as claims 49 and 50), directed to the process of making or using the allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because a claimed invention previously withdrawn from consideration under 37 CFR 1.142 has been rejoined, **the restriction requirement between groups I and II as set forth in the Office action mailed on 11/26/2008 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.
